Large Kent Estate (Supply only)

Gutterworks Limited was asked to tender to supply steel rainwater goods for a large Housing Development in the heart of Kent. We supply a variety of steel systems amongst a range of other Rainwater & Skyline systems, in this case, recommending the Zambelli Infinity system available through UK Distributor Alumasc Water Management Services.

The project offers a modern embodiment of the traditional Kent village and is set in a peaceful location within a Country Park & a popular family-oriented nature reserve. The contemporary style of the properties is ideal for the 'Mill finished' Galvanised Steel product and spanned a five-year period with scope to expand in the future.

Gutterworks Limited consists of three Divisions; Supply & Fit, Supply Only and Roofworks. This model enables us to meet the needs of our customers with Roofing, Roofline and Rainwater systems packages.

Our Supply Only section has a wealth of experience to guide our customers through the procurement process and we offer an on-site service for medium to large projects, enabling our clients to tailor their orders with a 'right first time' approach, enabling cost savings and meeting efficiency markers by reducing waste as a result of over ordering.
